

I am happy to hear that the Zoos' Print Journal, which primarily served the conservation community in South Asia so regularly and well for last seven years, is evolving to a much higher form!

It seems that South Asian ZPJ has morphed into an international Journal of Threatened Taxa, which will have a wider scope that includes all species rich countries globally. I am assured that JTT will retain all of the very welcome characters which made ZPJ so valued by wildlife academics of South Asia, that is, rapid publication, ease of access, and a wide range of subject matter in the wildlife arena. These are characteristics that are absolutely needed by the diverse communities of experts working to save species, and the editorial team of JTT is to be commended for providing an ideal global forum for sharing knowledge and experience.

We at the Conservation Breeding Specialist Group were pleased to see so many articles in ZPJ which resulted from CBSG processes and conservation biology, including *ex situ* as well as *in situ* activities. We also learned a tremendous amount about wildlife conservation by reading the contributions of so many of our colleagues. We wish the new incarnation, Journal of Threatened Taxa, all success, and we encourage everyone concerned with species to contribute to and make use of this valuable resource.

Robert C Lacy, Chair
IUCN SSC Conservation Breeding Specialist Group
