**Abstract:** We present the first documentation of the insect fauna of Lalwan Community Reserve and Ranjit Sagar Conservation Reserve, Punjab. The survey was conducted in the months of May and June 2019. Selected insect groups were focused on for the rapid documentation of the entomofauna. Overall, we recorded 91 species of insects belonging to the orders Lepidoptera, Coleoptera, and Odonata. A total of 68 species including 46 species of order Lepidoptera, nine species of Odonata, and 13 species of Coleoptera were reported from Lalwan Community Reserve. Thirty-seven species consisting of 23 species of Odonata and 14 species of Lepidoptera were recorded from Ranjit Sagar Conservation Reserve, Punjab.

**Keywords:** Coleoptera, diversity, entomofauna, Lepidoptera, Odonata.

A healthy ecosystem reveals the diversity and community structure of the insect groups in itself (Fagundes et al. 2011). Biodiversity surveys provide fundamental information needed for conservation planning, protected area justification and design, and development of management plans (Spector & Forsyth 1998). India is on the list as one of the major biodiversity rich countries of the world, due to the presence of a wide range of habitats from alpine to tropical ecosystems and freshwater to marine, desert, and island ecosystems (Ghosh 1996). According to studies conducted by Ghosh in the years 1990, 1994, and 1996, 2% of the total global space resides in India and in terms of biodiversity

it inhabits about 7% of faunal biodiversity globally. Among all the fauna on Earth class Insecta is the most flourishing, these appeared 3 billion years ago and spread all over the world due to their ability to survive in any habitat and extreme conditions; hence considered as indicators of changes happening in nature (Harrington & Stork 1995; Gullan & Cranston 1996). Insects are the most diverse animal group present on earth and show an extreme level of adaptability probably in all kinds of habitats (Harrington & Stork 1995; Landres et al. 1988).

Insects are the largest group among animals regarding their global presence (10,53,578 species); India is also rich in insect diversity with 65,047 species (Chandra et al. 2018), occupying several ecological niches, being considered very important in the dynamics of natural ecosystems (Borror et al. 1992; Kim 1993; Gullan & Cranston 1996; Thomazini & Thomazini 2000). Coleoptera (beetles) are the largest order of insects, with about 400,000 species worldwide, representing 30% of animals and about 40% of all insects (Lawrence & Britton 1991; Lawrence & Newton 1995; Costa 2000). About 180,000 species of Lepidoptera have been described in the world which comprise of moths and butterflies. A total of 1,439 species of butterflies have been described from India so far. They play an

important role in pollinating flowering plants. Odonata comprises carnivorous insects, dragonflies (Anisoptera) and the damselflies (Zygoptera). Odonates comprise 6,233 species in 685 genera globally, India has 486 species, about 50 subspecies in 151 genera and 18 families (Subramanian & Babu 2017). Dragonflies and damselflies are very good indicators of freshwater.

Sharma & Joshi (2009) documented the butterflies in district Hoshiarpur from Dholbaha Dam. Bhardwaj et al. (2017) documented the biodiversity of Siswan Reserve, Punjab in which 169 species of insects were reported. Singh et al. (2018) reported the coleopteran fauna of the Siswan Reserve, Punjab. The present study reveals the Lepidoptera, Coleoptera, & Odonata fauna of the Lalwan Community Reserve and Lepidoptera & Odonata fauna of Ranjit Sagar Conservation Reserve, Punjab for the first time.

### STUDY AREA

Lalwan Community Reserve (LCR) is situated in Tehsil Garshakar in district Hoshiarpur, Punjab. Ranjit Sagar Conservation Reserve (RSCR) is known for the Ranjit Sagar Dam, also known as the Thein Dam, constructed by the Government of Punjab on the Ravi River (Figure 1). RSCR is situated on the border of two states of India, Jammu & Kashmir and Punjab. Insect assessment was carried out only in the Punjab portion of the RSCR.

### METHODS

Lepidoptera, Odonata, & Coleoptera orders were focused in LCR, however only Lepidoptera and Odonata were focused in RSCR. The insect sampling survey was done through the water streams of forests of LCR and on the bank of the RSCR Lake. A total of 17 points were

selected at 1,000-m intervals for sampling in the LCR whereas 10 points were selected at the RSCR. Sampling was done both at day (09:00–18:00 h) and night (20:00–22:00 h). Sweep netting was performed for insects under order Lepidoptera, Hymenoptera, & Odonata. Light trapping method was applied during the evening and night sampling to collect insects like Lepidoptera and Coleoptera. Hand picking method was applied for insects under order Coleoptera. Insects were photographed and a few were also collected for their proper key identification. Odonates were identified using published literature (Andrew et al. 2008; Subramaniam 2009; Nair 2011) and web sources. Butterflies were identified with published literature (Uniyal 2004; Talbot 1939, 1947; Singh 2011) and web sources. Moths using (Hampson 1892–1896; Zolotuhin & Pinratana 2005; Pinratana & Cerny 2009; Nieuwerkerken et al. 2011). Beetles were identified with the published literature (Andrewes 1929; Sewak 2009; Chandra & Gupta 2013; Chandra 2018).

### RESULTS AND DISCUSSION

A total of 91 species (Table 1) belonging to 19 families were reported (Figure 2) including 68 species from LCR and 37 species from RSCR, which were reported for the first time from the regions. LCR holds the diversity of 46 species of order Lepidoptera, nine species of Odonata, and 13 species of Coleoptera. RSCR holds the diversity of 23 species of Odonata and 14 species of Lepidoptera (Figure 3). Photographs of all the species reported from these two regions are presented in Images 1–4.

Biodiversity conservation issues mostly focus on the ecological impact of management practices and their aim is to provide a practical background for sustainable biodiversity management. Such a study was done in the

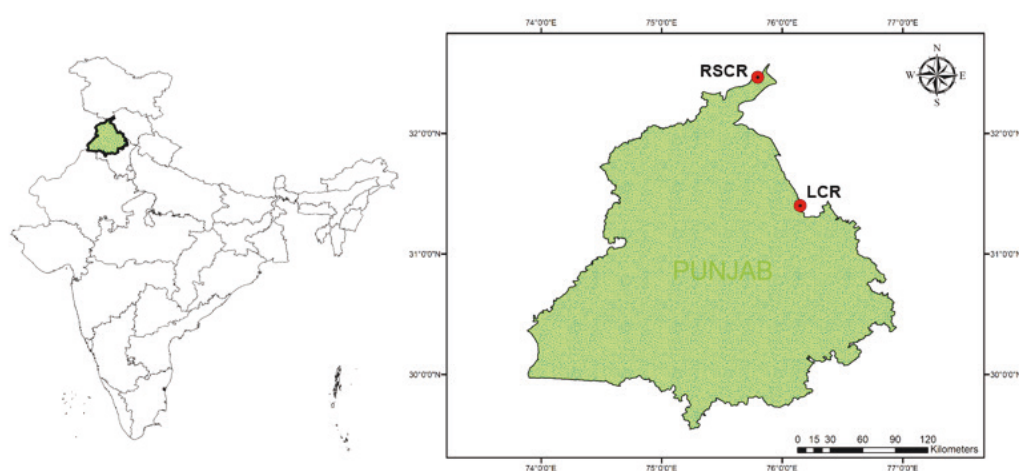

Figure 1. Map represents the two study areas in Punjab State.

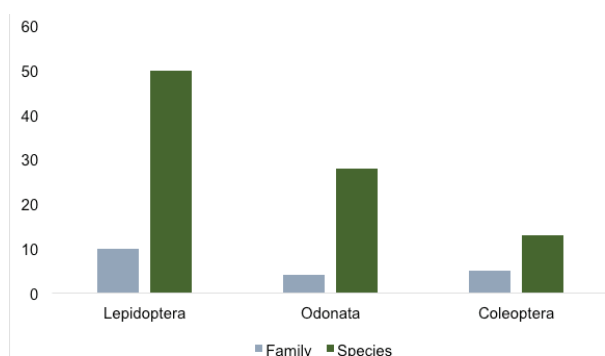

Table 1. Catalogue of species recorded from Lalwan Community Reserve and Ranjit Sagar Conservation Reserve.

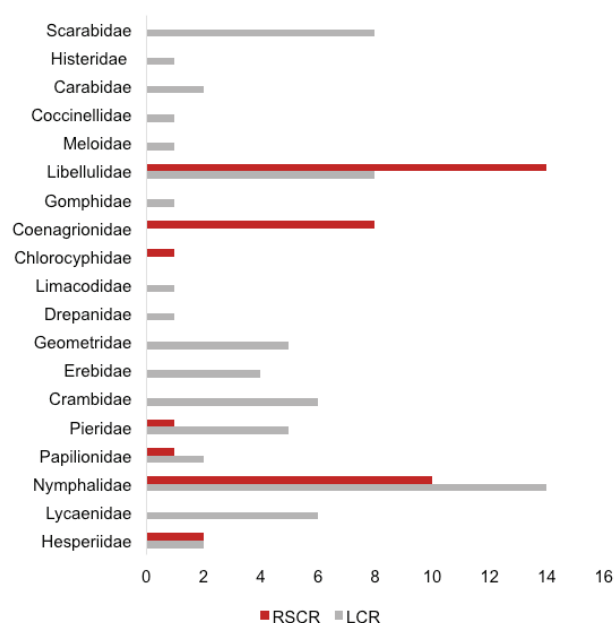

**Figure 2.** Overall number of insect families and species reported from the regions.

Siswan Reserve, Punjab which incorporated 169 species of insects to the insect fauna of Punjab (Bhardwaj et al. 2017; Singh et al. 2018) and the present study, conducted in LCR and RSCR has made a significant contribution towards increasing knowledge of insect species distributions in this area. These areas have extremely high entomofauna diversity with a total of 91 species of insects. Furthermore, the study unfolds new distribution records for all species found in this area.

PLATINUM  
OPEN ACCESS

The Journal of Threatened Taxa (JoTT) is dedicated to building evidence for conservation globally by publishing peer-reviewed articles online every month at a reasonably rapid rate at [www.threatenedtaxa.org](http://www.threatenedtaxa.org). All articles published in JoTT are registered under [Creative Commons Attribution 4.0 International License](https://creativecommons.org/licenses/by/4.0/) unless otherwise mentioned. JoTT allows unrestricted use, reproduction, and distribution of articles in any medium by providing adequate credit to the author(s) and the source of publication.

ISSN 0974-7907 (Online) | ISSN 0974-7893 (Print)

March 2021 | Vol. 13 | No. 3 | Pages: 17847–18058

Date of Publication: 26 March 2021 (Online & Print)

DOI: 10.11609/jott.2021.13.3.17847-18058

## Article

**Decline of White-throated Bushchat *Saxicola insignis* Gray J.E. & J.R. Gray, 1847 (Aves: Passeriformes: Muscicapidae) in Nepal: implications on its global status**

– Hem Sagar Baral, Tek Raj Bhatt, Bed Kumar Dhakal, Dhiraj Chaudhary, Hemanta Kumar Yadav, Laxman Prasad Poudyal, Hathan Chaudhary, Pradeep Raj Joshi, Carol Inskip & Rajan Amin, Pp. 17847–17855

## Conservation Application

**Relocation of a GPS collared conflict Sloth Bear *Melursus ursinus* (Mammalia: Carnivora) in Karnataka, India**

– Attur Shanmugam Arun, Shanmugavelu Swaminathan, Yogaraj Pannerseelam, Thomas Robert Sharp, Sydney Rae Stephens, Kartick Satyanarayan & Geeta Seshamani, Pp. 17856–17864

## Communications

**Not all gone: the rediscovery of Jaguar (Carnivora: Felidae: *Panthera onca*) and records of threatened monkeys (Primates: Mammalia) in the Magdalena River Valley of Caldas Department in Colombia, a call for their conservation**

– Leonardo Mendieta-Giraldo, Sergio Escobar-Lasso, Esteban Grajales-Suaza & José F. González-Maya, Pp. 17865–17874

**First confirmed sightings of Blue Whales *Balaenoptera musculus* Linnaeus, 1758 (Mammalia: Cetartiodactyla: Balaenopteridae) in the Philippines since the 19th century**

– Jo Marie Vera Acebes, Joshua Neal Silberg, Timothy John Gardner, Edna Rex Sabater, Angelico Jose Cavada Tiongson, Patricia Dumandan, Diana Maria Margarita Verdote, Christine Louise Emata, Jean Utzurum & Arnel Andrew Yaptinchay, Pp. 17875–17888

**Parasitic infection in captive wild mammals and birds in Bangabandhu Sheikh Mujib Safari Park, Cox's Bazar, Bangladesh**

– M. Najmul Hossain, Anita Rani Dey, Nurjahan Begum & Tahsin Farjana, Pp. 17889–17894

**A rapid assessment of waterbirds and the mangrove status in the Menabe Antimena Protected Area, Madagascar**

– Christoph Zöckler, Solofo Ndrina Razanamahenina & Matthias Markolf, Pp. 17895–17905

**An appraisal of avian species diversity in and around Purulia Town, West Bengal, India**

– Swastik Mahato, Sudipta Mandal & Dipanwita Das, Pp. 17906–17917

**An annotated checklist of amphibians in and around Dampa Tiger Reserve, Mizoram, India**

– Ht. Decemson, Sushanto Gouda, Lalbiakzuala, Lalmuansanga, Gospel Zothanmawia Hmar, Mathipi Vabeiryureilai & H.T. Lalremsanga, Pp. 17918–17929

**Redescription of the bug *Aschistocoris brevicornis* (Heteroptera: Coreidae) and first report on its life history from northern Maharashtra, India**

– Digvijay R. Jadhav, Renuka R. Khairnar, Balasaheb V. Sarode, Swapnil S. Boyane & Hemant V. Ghate, Pp. 17930–17938

**A new taxon of *Nacaduba* Moore, 1881 (Lepidoptera: Lycaenidae: Polyommataini) from Agasthyamalais of the Western Ghats, India**

– Kalesh Sadasivan, Baiju Kochunarayanan, Rahul Khot & S. Ramasamy Kamaya Naicker, Pp. 17939–17949

**Does the size of the butterfly enhance detection? Factors influencing butterfly detection in species inventory surveys**

– Anju Velayudhan, Ashokkumar Mohanarangan, George Chandy & S. Biju, Pp. 17950–17962

**Dragonflies and damselflies (Insecta: Odonata) of the Kole Wetlands, central Kerala, India**

– A. Vivek Chandran, Subin K. Jose & Sujith V. Gopalan, Pp. 17963–17971

**Distribution and diversity of climbing species in Papum Pare District of Arunachal Pradesh, India**

– Soyala Kashung, Padma Raj Gajurel & Binay Singh, Pp. 17972–17983

## Short Communications

**Occurrence of mammalian small carnivores in Kalakad-Mundanthurai Tiger Reserve, Western Ghats, India**

– A. Venkatesh, N. Sridharan, S. Agnes Jeya Packiavathi & K. Muthamizh Selvan, Pp. 17984–17989

**Changed avian assemblage of Savitribai Phule Pune University campus in last four decades**

– Kiran Choudaj & Varsha Wankhade, Pp. 17990–17998

***Sandracottus vijayakumari* (Coleoptera: Dytiscidae), a new aquatic beetle species from landslide hit area of Nelliampathy Forest Range, Western Ghats, Kerala, India**

– P.P. Anand, P.P. Ashiq, M. Smitha, M. Adhithya, T. Tibin & V. Suresh, Pp. 17999–18003

**The genus *Basiria* Siddiqi, 1959 (Nematoda: Tylenchidae) from Dezfoul region, Iran**

– Manouchehr Hosseiniand, Ali Eskandari & Reza Ghaderi, Pp. 18004–18010

**A new species of braconid wasp *Meteorus* Haliday (Hymenoptera: Braconidae: Meteorinae) from India**

– Zaheer Ahmed, Altaf Hussain Mir & Mohammad Shamim, Pp. 18011–18014

**Addition of four woodlice species (Crustacea: Isopoda) to the checklist of Iranian Oniscidea**

– Yaser Bakhshi, Saber Sadeghi, Hamid Darvishnia & Meysam Dashan, Pp. 18015–18019

**Catalogue of selected insect groups of Lalwan Community Reserve and Ranjit Sagar Conservation Reserve, Punjab, India**

– Amar Paul Singh, Agni Chandra, Virendra Prasad Uniyal & Bhupendra Singh Adhikari, Pp. 18020–18029

**Potential phytophagous insects of *Pteridium revolutum* (Blume) Nakai, an invasive fern**

– M.S. Arjun & S. Gopakumar, Pp. 18030–18034

## Notes

**Freshwater medusae *Limnocyclus indica* Annandale, 1911 in the Cauvery Wildlife Sanctuary, Dubare Reserve Forest and Shivanasamudram in Karnataka, India, with a commentary note on the exotic *Craspedacusta sowerbii* Lankester, 1880**

– Naren Sreenivasan & Joshua Barton, Pp. 18035–18038

***Actinoradians* (Moore, 1878) (Hesperiidae: Hesperinae: Aeromachini): addition to the butterfly fauna of Haryana, India**

– Bitupan Boruah, Rajesh Chahal & Abhijit Das, Pp. 18039–18041

**Rediscovery of the rare Desert Grizzled Skipper *Spialia doris evanida* Butler, 1880 (Hesperiidae: Pyrginae) from the Thar Desert, Rajasthan, India**

– Shyam Sundar Meena, Anil Tripathi, Vijay Kumar Koli & M. Akram Awan, Pp. 18042–18044

**Habitat association and hybridization in woodbrowns (*Lethe nicetas*, *L. sidonis*, & *L. dakwania*) (Lepidoptera: Nymphalidae: Satyrinae) in Kedarnath Musk Deer Reserve, western Himalaya**

– Arun Pratap Singh & Tribhuvan Singh, Pp. 18045–18049

***Begonia flaviflora* Hara (Begoniaceae): a new record to the flora of Bhutan**

– Phub Gyeltshen, Sherab Jamtsho, Sangay Wangchuk & Dhan Bahadur Subba, Pp. 18050–18053

**Revisiting the taxonomy of *Strobilanthes lawsonii* and *S. pushpangadanii* (Acanthaceae), two endemic taxa of Western Ghats, India**

– Blessy Cherian, K.M. Prabhukumar, R. Jagadeesan, V.V. Naveen Kumar & Indira Balachandran, Pp. 18054–18058
