Pentatropis R.Br. ex Wight & Arn. (Apocynaceae), a new generic record for Kerala, India

The Genus *Pentatropis* R.Br. ex Wight & Arn. (Apocynaceae) comprises six species, with a distribution ranging from Africa & Madagascar through Arabia, India, Pakistan, Sri Lanka, to Australia (Jagtap & Singh 1999). In India it is represented by two species, viz., *P. capensis* and *P. nivalis*. The generic name *Pentatropis* is derived from Greek words *penta* meaning ‘five’ and *tropis* meaning ‘a keel’, referring to the shape of the corona (Jagtap & Singh 1999). The genus is characterized by slender twining herbs or undershrubs, semi succulent leaves, small purplish flowers with rotate corolla and corona of five erect laterally compressed processes with an upcurved spur at base (Gamble & Fischer 1936). *Pentatropis capensis* is highly medicinal and the whole plant is used as antifungal, antiseptic, coolant and useful in skin diseases (Pandey et al. 2005).

During the floristic survey of Palakkad Gap, Western Ghats, Kerala, the authors came across a population of *Pentatropis* near Kozhinjampara, Palakkad, Kerala, which lies on the eastern front of the Palakkad Gap. Specimens were collected in flowering and the identity of specimen was confirmed as *Pentatropis capensis* (L.f.) Bullock using pertinent literature and consultation of specimens available at global biodiversity information

facility (<https://www.gbif.org/>) and Kew science (<https://specimens.kew.org/>). The taxon was previously known in India from Karnataka, Tamil Nadu, Andhra Pradesh, Odisha, Maharashtra, and Gujarat (Matthew 1983; Pandey et al. 2005; Rao et al. 2016) but not reported from the state of Kerala (Vajravelu 1990; Sasidharan 2013). It is reported here as a new record for the state of Kerala. The description is given with notes and keys for easy identification.

road sides in association with *Abutilon indicum* (L.) Sweet, *Calotropis procera* (Aiton) Dryand. and *Cardiospermum halicacabum* L. The species is well adapted to the arid climate of the Deccan and northwestern India.

Distribution: Bangladesh, India, Pakistan, Sri Lanka,

and Vietnam (POWO 2021); India (Karnataka, Tamil Nadu, Andhra Pradesh, Odisha, Gujarat (Pandey et al. 2005; Rao et al. 2016), and Kerala (Chittur, Kozhinjampara, reported here).

This species is widely distributed in arid to semiarid belts of central and peninsular India. It is a therophyte (therophytes are annual but this species is perennial) according to life form classification by Raunkiaer and it thrives in arid climate by bearing unfavourable dry seasons in dormant form (Raunkiaer 1934; Kambhar & Kotresha 2012).

In this report, a therophytic perennial species of *Pentatropis* genus (*P. capensis*) belonging to the family Apocynaceae was reported as a new record for the state of Kerala from the eastern part of the Palakkad Gap.
