Butterflies (Lepidoptera: Rhopalocera) of Mahananda Wildlife Sanctuary, West Bengal, India: a preliminary checklist

Ratnadeep Sarkar¹  & Priyanka Rai² 

^{1,2} Ashoka Trust for Research in Ecology and the Environment, The Himalaya Initiative, Gangtok, Sikkim 737102, India.

¹ratnadeepsarkar37@gmail.com (corresponding author), ²priyanka.raai@atree.org

Both the authors contributed equally and share the first authorship.

Abstract: The present study from Mahananda Wildlife Sanctuary records a total of 98 butterfly species among which 66 species are found as 'first-time records' from the sanctuary. Therein, eight butterfly species are scheduled under the Wild Life (Protection) Amendment Act, 2022 and two are enlisted in the IUCN species list (2016). Nymphalids were recorded at the highest frequency (45.92%) whereas Riodinids are rarest (2.04%).

Keywords: Darjeeling, lepidopteran-diversity, new species records, Nymphalidae, protected area, Riodinidae, Terai.

Bangla: পশ্চিমবঙ্গের হিমালয়-পাদদেশ অঞ্চলে অবস্থিত মহানন্দা অভয়ারণ্যে ২০২৪ সালের মার্চ থেকে সেপ্টেম্বর মাস পর্যন্ত একটি সমীক্ষা চালিয়ে ছয়টি পরিবারের অন্তর্গত ৯৮টি প্রজাতির প্রজাপতিকে নথিভুক্ত করা হয়েছে যার মধ্যে ৬৬টি প্রজাতির এই অভয়ারণ্যে প্রথম দেখা মিলেছে। এদের আটটি প্রজাপতি প্রজাতি 'বন্যপ্রাণ সংরক্ষণ সংশোধিত আইন' (২০২২) এবং দুটি 'আইইউসিএন-এর প্রজাতি তালিকাভুক্ত' (২০১৬)। প্রজাপতিগুলির মধ্যে নিম্ফ্যালিডি পরিবারের প্রজাতি সংখ্যাই সর্বাধিক (৪৫.৯২%) এবং রিওডিনিডি-র প্রজাতি সংখ্যা সর্বনিম্ন (২.০৪%)।

Competing interests: The authors declare no competing interests.

Author details: SARKAR, R. worked as a researcher at the University of North Bengal, ATREE and WWF, cherishes his close interest in insects. RAI, P. is a researcher at ATREE and currently, pursuing her PhD from Sikkim Central University.

Author contributions: RS & PR—Conceptualization, field works, species identification, writing original draft, review writing and editing.

Acknowledgements: Authors are highly grateful to the West Bengal Biodiversity Board (WBBB), Kolkata, as this checklist is an outcome of the Chinese Pangolin Project funded by the authority. The authors express their sincere gratitude to the Directorate of Forests, Government of West Bengal, for the permissions to conduct this research work in the protected area. Range officers and beat officers of the Mahananda Wildlife Sanctuary are additionally acknowledged for the permission and co-operation all along. We also cordially thank all the forest guards for their support in the field. Authors are also indebted to Mr. Sagar Chhetri, forest staff, for his help in collecting photographs of butterflies. Dr. Sarala Khaling, International Centre for Integrated Mountain Development, Nepal, and former regional director of ATREE-Eastern Himalaya Northeast Regional Office, is thanked for institutional support. Dr. Sunita Pradhan, senior fellow at ATREE, The Himalaya Initiative, Gangtok, Sikkim-737102, India and PI of the Chinese Pangolin Project, is thanked for her continuous encouragement and deliberate suggestions for the development of butterfly checklist from the sanctuary.

INTRODUCTION

Butterflies (Lepidoptera: Rhopalocera) are 'day-flying lepidopterans', belonging to the world's second largest insect order under the Class Insecta (Wendimu et al. 2024). These widespread creatures are found almost in every ecological stratum and perform diverse ecological functions in nature. Butterflies act as bio-indicators for a healthy environment and pollinate many flowering plants, thus serving a wide range of ecological benefits (Sinha et al. 2019).

The northern sub-Himalayan part of West Bengal is extremely biodiverse; a handful of studies were reported on butterfly diversity, records, and its ecology from this region. Chakraborty et al. (2023) recorded a few butterfly species from Buxa Tiger Reserve (BTR). Only two studies have been conducted from the Neora Valley National Park (Roy et al. 2012; Sengupta et al. 2014). Pradhan & Khaling (2020) recorded butterfly diversity from an organic tea plantation garden of the Darjeeling hills, and a single work from the University of North Bengal campus have been reported (Saha et al. 2023) till date. Approximately, 256 species of butterflies have been recorded from Darjeeling district, of which the family Nymphalidae is the most diverse (114 species), followed by Lycaenidae (52 species), Pieridae (28 species), Hesperidae (28 species), Papilionidae (27 species), and Riodinidae (7 species) (Roy et al. 2012; Sengupta et al. 2014; Pradhan & Khaling 2020; Saha et al. 2023).

Singhal & Chowdhury (1996) provided the first comprehensive record of biodiversity from Mahananda Wildlife Sanctuary (MWS), documenting 170 species of plants (39 trees, 55 herbs, 54 shrubs, and 22 climbers) and 329 species of animals (32 mammals, 253 birds, 9 reptiles, 6 amphibians, and 27 lepidopterans). No systematic study on butterfly diversity has been conducted in MWS to date. Only a baseline study on the flora and fauna of MWS is available (Singhal & Chowdhury 1996), conducted collaboratively by the Wildlife Wing, Forest Department, Government of West Bengal; the West Bengal Forest Development Corporation Ltd.; and the Nature, Environment & Wildlife Society (NEWS). In the survey report by Singhal & Chowdhury (1996), 27 species of butterflies were listed along with other wildlife taxa approximately 30 years ago, providing only rudimentary information on the butterfly fauna of MWS. There are several protected forests in India where butterfly diversity data was recorded because of its pivotal role as pollinators in all the habitats (Sengupta et al. 2014; Gogoi et al. 2023; Choudhury et al. 2024). Therefore, the present study was undertaken in MWS to generate an

updated checklist of butterfly species, providing baseline information to facilitate future studies on their diversity, abundance, distribution, and conservation within this protected area.

MATERIALS AND METHODS

MWS along its four ranges, namely, Sukna or East, West, North, and South Range, is expanded over the foothills of central Himalaya and parts of Terai plains (26.798°–26.925° N, 88.393°–88.558° E) of West Bengal (Figure 1). It falls under one of the most species-rich regions in the Indian subcontinent. Hydrologically, the sanctuary is influenced by the Mahananda River system, with the Teesta River defining its eastern margin. The sanctuary encompasses an area of about 161 km², with elevations ranging approximately 150–1,300 m (MWS Management Plan 2012–2022). Most of the habitats of the sanctuary are hilly mountains with precipitous to moderate slopes. The sanctuary contains temperate to tropical climate which give rise evergreen tropical, sub-tropical and deciduous forest and even grasslands in its different parts. Along the two rivers, MWS has characteristic thin watercourses or streams generated from the Himalayan mountains and monsoon rains, innervating the whole sanctuary, are lifelines to its numerous bioresources and wildlife. The sanctuary is situated in the trans-boundary between highly biodiverse 'Doars' in the eastern side and Darjeeling Himalaya in its extreme northern side.

The perennial and non-perennial watercourses of MWS serve as lifelines to the wildlife that often visit the places for water and leave their droppings on the shores. The natural bleach and mineral salts are accumulated on the rocks and sandy shores from the algae. The forest soil also shows a variation of sandy loam, coarse sand or 'slit' type texture and color from light brown to dark brown, contains different grades of mineral salts and organic matters (MWS Management Plan 2012–2022). These attributes of several spots of Mahananda habitat attract the butterflies to puddle inside the sanctuary for the accumulation of salts, minerals, and amino acids, essential for their physiological and reproductive functions.

For this study, opportunistic surveys were carried out on sunny days from 0800 h to 1200 h, occasionally in the dawn for capturing specific butterflies, between March–September 2024, in the sanctuary. Due to permanent occupancy of mega-mammals, like elephants, butterflies were solely documented by direct sighting and random

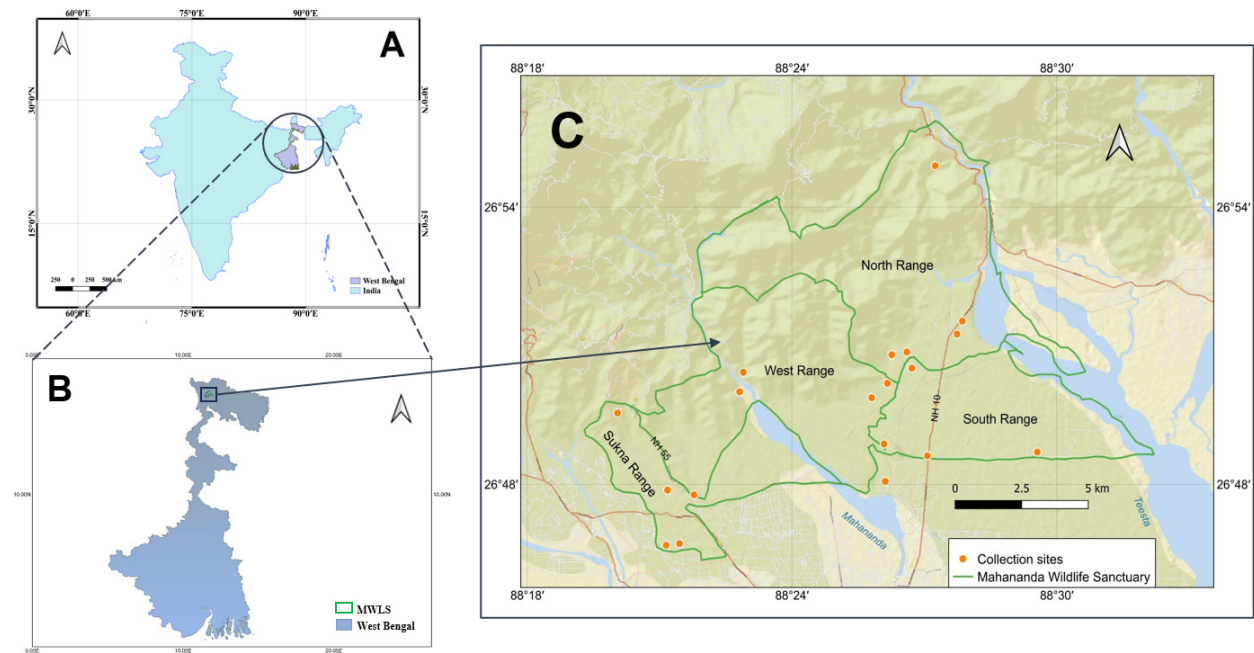

Figure 1. Study area map: A—West Bengal within India | B—Location of the study area within West Bengal | C—Mahananda Wildlife Sanctuary.

walks (Murugesan et al. 2013; Upadhyay et al. 2023) near the water courses, roadsides, range office compounds, plantation forests and sometimes in forest core areas (Image 6). Butterflies were photographed in their natural habitat using a digital camera (NIKON P-900), and common species were identified based on their body and wing color patterns, and designs on the spot. All species were later verified using published literature (Mukherjee & Mondal 2020), standard books (Evans 1932), field guide books (Smetacek 2017; Sinha et al. 2019), and from some relevant websites (<https://www.ifoundbutterflies.org>; <https://www.inaturalist.org>) (Kunte et al. 2026; iNaturalist 2026). All photo plates and data charts were prepared in the MS-PowerPoint 2019 and MS-Excel 2019, respectively.

RESULTS

In this study, a total of 98 butterfly species, representing 66 genera across all six extant families, were recorded from MWS. Among these, 86 species were photographed during the survey (Images 1–5). Detailed information on all 98 species is presented in Table 1.

The family-wise distribution of species in the sanctuary was as follows: Riodinidae—2 species (2.04%), Hesperidae—8 species (8.16%), Papilionidae—9 species (9.18%), Pieridae—12 species (12.24%), Lycaenidae—22

species (22.45%), and Nymphalidae—45 species (45.92%) (Table 1, Figure 2). Four families, namely, Papilionidae, Pieridae, Lycaenidae, and Nymphalidae, were recorded in all four ranges of the sanctuary, whereas Hesperidae was absent from the northern range. Riodinidae was recorded exclusively in the eastern (Sukna) range (Table 1; Figure 3). Among all families, Nymphalidae was the most species-rich and abundant, while Riodinidae was the least abundant, represented by only two species.

Butterfly species were observed within an altitudinal range of 161–576 m in MWS, with 91 out of the 98 species found occurring below 200 m, ranging from sub-tropical and tropical to moist forests (Table 1).

Of the 98 recorded species, eight are listed under the Wildlife (Protection) Amendment Act, 2022. Two species, Orchid Tit *Hypolycaena othona* and Grey Count *Tanaecia lepidea*, are included in Schedule I; five species, Danaid Eggfly *Hypolimnas misippus*, Long-banded Silverline *Spindasis lohita*, Great Evening Brown *Melanitis zitenius*, White-bar Bushbrown *Mycalesis anaxias*, and Blue Oakleaf Butterfly *Kallima horsfieldi*, are included in Schedule II; and a single species, Common Crow *Euploea core*, is included in Schedule IV (Table 1). Under the IUCN Red List (2016), two species—Common Imperial *Cheritra freja* and Plain Tiger *Danaus chrysippus*—are classified as ‘Least Concern’ (Table 1), whereas the remaining species have not been assessed.

DISCUSSION AND CONCLUSION

Out of 98 species, 18 were found both this study and in the record of Singhal & Chowdhury (1996). Whereas, nine other species of previous record were absent during this study. Amongst 66 species were first-time recorded from the sanctuary in this study: Nymphalidae—27 species—*Cirrochroa aoris*, *Junonia hierta*, *Junonia lemonias*, *Parantica aglea*, *Tirumala septentrionis*, *Melanitis zitenius*, *Chersonesia risa*, *Kallima inachus*, *Mycalesis anaxias*, *Mycalesis visala*, *Orsotriaena medus*, *Mycalesis perseus*, *Tanaecia jahnu*, *Tanaecia lepidea*, *Tanaecia julii*, *Euthalia aconthea*, *Neptis clinia susruta*, *Athyma inara*, *Pantoporia hordonia*, *Neptis miah miah*, *Athyma perius perius*, *Lasippa viraja*, *Lebadea martha*, *Charaxes psaphon imna*, *Hypolimnas bolina*, *Elymnias hypermnestra undularis*, *Symbrenthia lilaea*; Lycaenidae—19 species—*Arhopala centaurus*, *Castalius rosimon*, *Cheritra freja*, *Spalgis epius*, *Talicauda nyseus*, *Heliophorus epicles*, *Pseudozizeeria maha*, *Jamides alecto*, *Jamides bochus*, *Jamides celeno*, *Catapaecilma*

major, *Catochrysops strabo*, *Hypolycaena erylus*, *Hypolycaena othona*, *Spindasis lohita*, *Prosotas nora*, *Leptotes plinius*, *Chilades pandava*, and *Loxura atymnus*; Hesperidae—eight species—*Seseria sambara*, *Gerosia bhagava*, *Pseudocoladenia dan*, *Sarangesa dasahara*, *Burara gomata*, *Pelopidas agna*, *Oriens gola*, *lambrix salsala*; Pieridae—six species—*Pieris canidia*, *Eurema blanda*, *Catopsilia pomona*, *Hebomoia glaucippe*, *Cepora nerissa*, and *Appias olferna*; Papilionidae—four species—*Graphium antiphates*, *Graphium doson*, *Papilio nephelus*, and *Papilio memnon*; and Riodinidae—two species—*Zemeros flegyas* and *Abisara bifasciata*. Records of the majority butterfly species (91 species) within a 162–200 m range of MWS is corroborated with Priya (2024).

In India, about 500 Nymphalid species are found, among which 45 species are now found from MWS.

1. *Zemerus flegyas*

2. *Abisara bifasciata*

3. *Seseria sambara*

4. *Gerosis bhagava*

5. *Pseudocoladenia dan*

6. *Sarangesa dasahara*

7. *Burara gomata*

8. *Pelopidas agna*

9. *Oriens gola*

10. *Iambrix salsala*

11. *Graphium agamemnon*

12. *Graphium antiphates*

13. *Graphium doson*

14. *Graphium sarpedon*

15. *Papilio nephelus*

16. *Papilio memnon*

17. *Papilio polytes*

18. *Pieris canidia*

19. *Leptosia nina*

20. *Eurema blanda*

As other studies from the region (Roy et al. 2012; Sengupta et al. 2014; Pradhan & Khaling 2020; Saha et al. 2023), here only the highest number of species is from Nymphalidae and the lowest number from Riodinidae. Their dominance in MWS may be due to its habitat preferences and larval host as well as nectar plants among the vast floral diversity in the foothills of the Himalaya (Sengupta et al. 2014; Pradhan & Khaling 2020). With 98 butterfly species, several of protected under WPA, 1972 and the IUCN species list (2016), the MWS can be considered an important reserve of butterflies in the transition zone between the peninsular Indian sub-region and Indo-Malayan sub-region of the Oriental region.

With 98 species, although this work is the first of its kind in the record of butterflies, not only from MWS but also from any protected forests of the Darjeeling District, this study demands systematic, long-term investigation for the record of more butterfly species as well as a survey on its nectar and host plants and precise efforts for the introduction of conservation and management practices for the butterfly fauna in MWS.

OPEN ACCESS

The Journal of Threatened Taxa (JoTT) is dedicated to building evidence for conservation globally by publishing peer-reviewed articles online every month at a reasonably rapid rate at www.threatenedtaxa.org. All articles published in JoTT are registered under [Creative Commons Attribution 4.0 International License](https://creativecommons.org/licenses/by/4.0/) unless otherwise mentioned. JoTT allows unrestricted use, reproduction, and distribution of articles in any medium by providing adequate credit to the author(s) and the source of publication.

ISSN 0974-7907 (Online) | ISSN 0974-7893 (Print)

April 2026 | Vol. 18 | No. 4 | Pages: 28607–28738

Date of Publication: 26 April 2026 (Online & Print)

DOI: 10.11609/jott.2026.18.4.28607-28738

Articles

Altered nocturnal vocal activity patterns in Tropical Kingbird *Tyrannus melancholicus* (Passeriformes: Tyrannidae) at a site with artificial lighting

– David Ramírez-Adame, Claudia Cristina Valenzuela-Inzunza, Rosa Gabriela Beltrán-López, Eduardo Michael Acosta-Morán & José Antonio Guerrero, Pp. 28607–28614

Importance of integrating multiple criteria in breeding habitat management for urban frogs and toads (Amphibia: Anura) in Jakarta City, Indonesia

– Mohamad Isnin Noer, Ivan Hafidhuddin, Agung Sedayu, Ratna Komala & Alvira Salsabila, Pp. 28615–28622

Rediscovery of the endemic and threatened Jewel Damselfly *Rhinocypha togeanensis* van Tol & Günther, 2018 (Insecta: Odonata: Chlorocyphidae) in Indonesia, with notes on its habitat loss and the urgent need for conservation action

– Muhammad Amiruddin, Diky Dwiyanto, Nuranisa Nuranisa, Jusriadi Jusriadi, Nur Khasanah & André Günther, Pp. 28623–28630

The dragonfly (Odonata) community structure at Sukamade Resort, Meru Betiri National Park, Indonesia

– Abdu Rohman, Wachju Subchan & Dwi Artika Amalia, Pp. 28631–28643

Butterflies (Lepidoptera: Rhopalocera) of Mahananda Wildlife Sanctuary, West Bengal, India: a preliminary checklist

– Ratnadeep Sarkar & Priyanka Rai, Pp. 28644–28656

Communications

A preliminary study to investigate behavioural differences among elephants residing near the Buttala-Kataragama and Habarana roads in Sri Lanka, where they are regularly fed by passing motorists

– Tharindu Muthukumarana, Pp. 28657–28661

Impact analysis of SMS-triggered elephant activity alert lights

– Sanjoy Deb, Sannasi Chakravarthy Surulimani Ramaraj, Sharmila Arumugam & Saravana Kumar Radhakrishnan, Pp. 28662–28667

Report of phimosis in an Andean Bear *Tremarctos ornatus* (Mammalia: Carnivora: Ursidae) and ultrasonographic description of the male genitourinary system

– Aléxia Pimenta Bom-Conselho, Agatha Campinho Belsito, Arthur Carlos Trindade, Ciro Alexandre Teixeira Cruvinel, Pedro Nacib Jorge-Neto & Cristiane Schilbach Pizzutto, Pp. 28668–28672

Assessing avifaunal diversity and anthropogenic impacts on Ladhwaya Pond, Gwalior, India

– R.K. Lodhi, N.P. Gour, S. Shakya, A. Jain, R.K. Gurjwar & R.J. Rao, Pp. 28673–28680

New record of invasive moth *Phalera cf. bucephala* (Linnaeus, 1758) (Lepidoptera: Notodontidae) on *Salix alba* (Salicaceae) from Ladakh, India

– Mohd Hussain, Nassreen Fatima Kacho, Basharat Ali & Mohd Ali, Pp. 28681–28687

Diversity and distribution of wasps and bees (Insecta: Hymenoptera: Vespidae, Apidae) in the Gauhati University Campus, Kamrup Metro, Assam, India

– Briyanka Kashyap, Jinti Das, Malabika Kakati Saikia & Prasanta Kumar Saikia, Pp. 28688–28695

Unveiling genital specializations in *Megascolex travancorensis* (Oligochaeta: Megascolecidae) through scanning electron microscopy

– Jaya Manazhy, Sona Sajeev, Aja Manazhy, John Warren Reynolds & Santhosh Punnakattu Parambil, Pp. 28696–28702

Review

Diversity and distribution of climbers of Uttar Pradesh: a preliminary review

– Rameshwar Prasad, Muzeev Ahmad, Sushma Verma, K.M. Prabhukumar & T.S. Rana, Pp. 28703–28718

Short Communications

First record of leucism in Rock Hyrax *Procapra capensis* from Ibbex Reserve Protected Area, Saudi Arabia

– Zaffar R. Mir, Naif Alajmi, Ali Alahmari, Ahmad Alobaid, Khalid Almaliki, Farah Niaz, Naif Alqahtani & Ahmed Boug, Pp. 28719–28723

First national record of Yellow Owl Butterfly *Neorina hilda* Westwood, 1851 (Lepidoptera: Nymphalidae: Satyrinae) for Nepal

– Nishan Limbu, Pp. 28724–28728

Notes

First record of Wall's Krait *Bungarus walli* Wall, 1907 (Reptilia: Squamata: Elapidae) from Assam, and diagnostic keys to the kraits of India

– Bijay Basfore, Abhi Medhi, Nazrul Islam, Rathin Barman, Madhurima Das, Anjana Singha Naorem & Jayaditya Purkayastha, Pp. 28729–28733

Eastern range extension of the band-winged grasshopper *Pusana rugulosa* (Uvarov, 1921) (Insecta: Orthoptera: Acrididae) in India

– Amlanjyoti Gautam, Rajnish Ranjan & Jennifer Lyngdoh, Pp. 28734–28738
